How to setup Streamlabs Chatbot?!

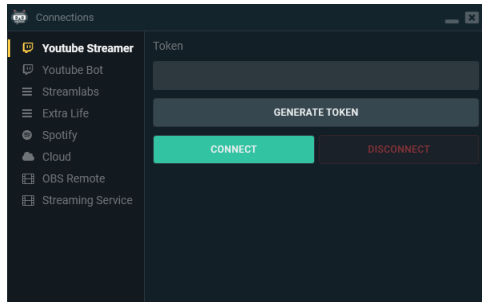

Youtube Streamer

Step 1: Go to Connections

Simply navigate to the bottom left corner of the screen and click on

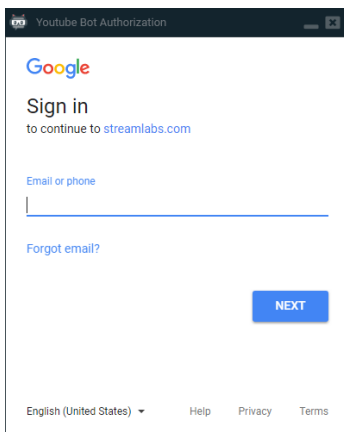

which will

Step 3: Generating a Token

Click on Generate Oauth-Token , this will open the Authorization page on the bot.

Step 4: Authorize

Login to your Google Account and then choose your account and click Allow, this will immediately fill in the token field with a new token after which you can click connect.

Step 5: Click Connect

If you've done everything correctly your account will be connected to chat. In case it fails you probably didn't activate live streaming for your account yet. This can be done by going to <https://www.youtube.com/features> .

Youtube Bot

Step 1: Make sure you've made a Youtube account for the bot

Go to Youtube and create a new account for the bot to use and make sure to also create the bot's channel by going to the picture in the top right and going to my channel and confirming the popup afterwards.

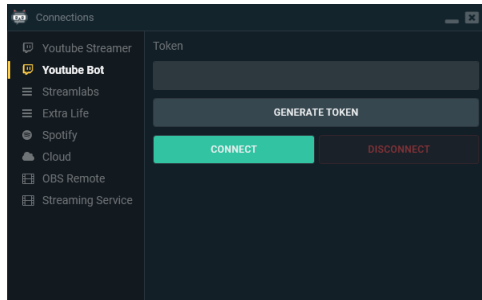

Step 2: Go to Connections

Simply navigate to the bottom left corner of the screen and click on

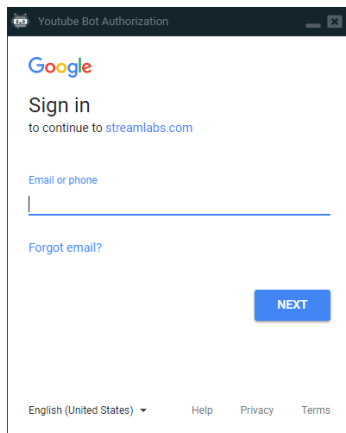

which will

open the Connections window and then click on "Youtube Bot".

Step 4: Generating a Token

Click on Generate Oauth-Token , this will open the Authorization page on the bot. You will have to log in to your bot's account.

Step 5: Click Authorize

Login to your Google Account and then choose your bot's account and click Allow, this will immediately fill in the token field with a new token after which you can click connect.

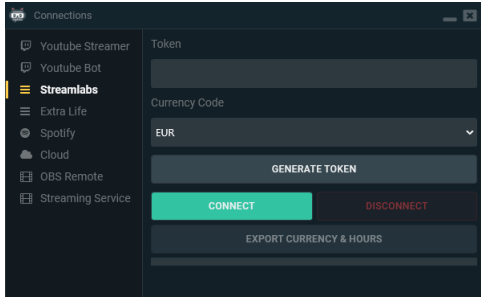

Step 6: Click Connect

If you've done everything correctly your account will be connected to chat.

Streamlabs

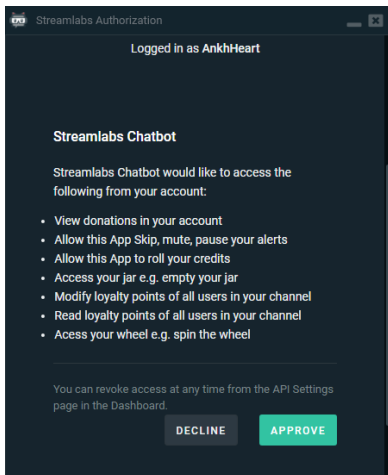

Step 1: Go to Connections

Simply navigate to the bottom left corner of the screen and click on  which will open the Connections window and then click on "Streamlabs".

Step 2: Generating a Token

Click on "Generate Token" this will open the Authorization page in on the bot.

Step 3: Click Authorize

Click "Approve" and this will automatically fill in the token in to the token field.

Step 4: Click Connect

Finally click "Connect" and if everything went well then your Streamlabs will be connected. Now you can set how much someone gains for every \$/€/... someone donates under the currency system.

If you wish for the bot to post an in chat notification then go to Notifications and enable the Streamlabs Donate Notification.

Step 5: Enable Chatbot pages on your Streamlabs Tipping Page

Go to Settings -> General -> Scroll to Show Chatbot Tab on Donations Page and enable it. Afterwards pick which tabs you want to show. Next go to Connections -> Streamlabs and click Sync to sync your Commands & Quotes. The Playlist, Songlist and Queue auto sync every 2.5 minutes so no need to manually sync those.

Cloud

Step 1: Disclaimer

In order to use this you will either have to have Dropbox, Google Drive or another similar Cloud service's client installed on your system.

These services usually come with a dedicated server on your Computer from where data will automatically be synced to the cloud.

You'll have to set these up on your own seeing as there are more than enough tutorials on youtube.

Dropbox: <https://www.dropbox.com/install>

Google Drive: <https://www.google.com/drive/download/>

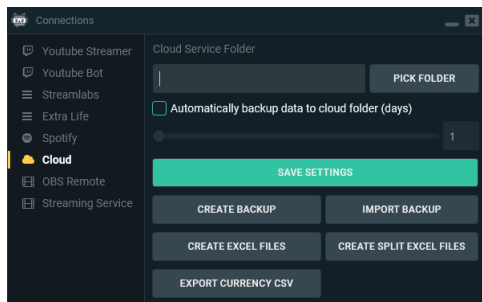

Step 2: Go to Connections

Simply navigate to the bottom left corner of the screen and click on

which will

open the Connections window and then click on "Cloud".

Step 3: Picking your Cloud Folder Path

Click on "Pick Folder" and Navigate to Cloud Service of Choice's Local folder and click "Save". This is where the bot will be able to output Automated Backups and Excel files which you can share with the stream.

In case you want the bot to create automated backups check the box and set the interval of the backups. Do mind though that the bot does not delete older backups so this is your responsibility. Once in a while be sure to delete some of the older ones so your Cloud data doesn't get capped out.

Click "Save Settings" to finish the process.

Step 4: Sharing a Link to Excel Files

Click "Create Excel Files" this will generate 3 excel files based on your data. The Data.xlsx will contain your Commands, Timers, SFX, Events, Points, Ranks, ... As for the Songlist.xlsx this will contain your Songlist. The Queue.xlsx will contain your Queue.

Now that those files exist navigate to your Cloud folder, right click on the file for which you want a link.

In case you're using Dropbox click on "Copy Dropbox Link" this will have a link copied to your clipboard.

In case you're using Google Drive click on "Google Drive" -> "Share" -> "Get Shareable Link" and copy the link.

Now you can either a short link using <http://tinyurl.com> or use the full link in your commands.

The Songlist & Queue excel files get updated every 2.5 minutes. The Data files only get created whenever you click "*Create Read Only Excel Files*".

OBS Remote

Step 1: Open your Browser

Next up make sure you have the OBS Remote Plugin installed if you do not then go here: <https://obsproject.com/forum/resources/obs-websocket-remote-control-of-obs-studio-made-easy.466/> and install the plugin.

Step 2: Open OBS

Go to Tools -> Websocket Server Settings inside of OBS and it will pop up a small window that allows you to configure the OBS Remote Plugin. Set which port you wish to use there and Enable Authentication. After doing so plug in a password that you wish to use so only authorized clients may connect to your OBS.

Once you are done just click OK to save your settings.

Step 3: Go to Connections

Simply navigate to the bottom left corner of the screen and click on

which will

open the Connections window and then click on "OBS Remote".

Step 4: Fill in the fields

If Streamlabs Chatbot is running on the same PC as your OBS then simply leave the IP to 127.0.0.1 if you are running a two PC setup and OBS is on another system then fill in the IP of your second PC which is running OBS.

If you changed the port in the OBS Websocket Server Settings then change it here as well. If you are using Authentication then fill in your password.

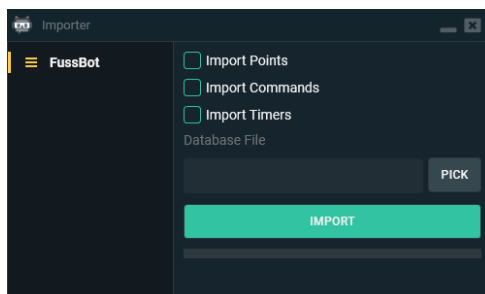

Step 5: Click Connect

Finally click connect and the bot will connect to your OBS allowing you to create commands and scripts which hide/show specific sources, Unmute your mic when you're being a dummy, Stop your stream when you pass out directly from chat so people can't watch you snooze away,...

Importing Data from another Bot

Simply click on the ? in the top Right -> Open External Bot Importer

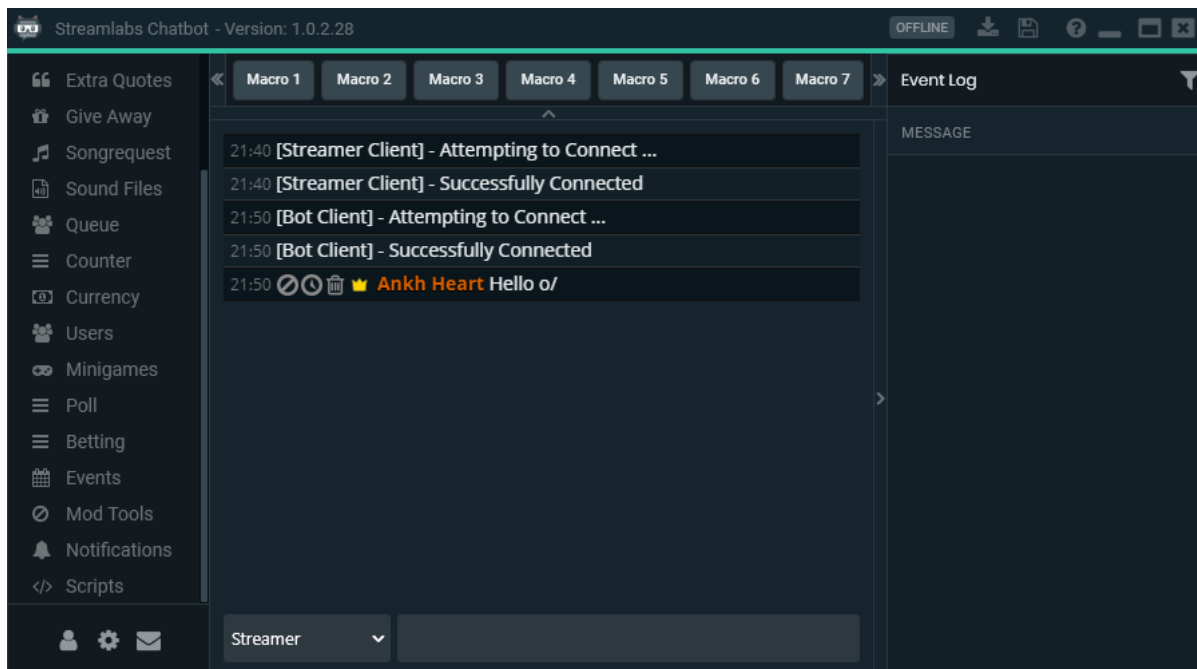

FussBot

In order to Import Data from FussBot you need to navigate to your fussbot .db file. Once you have done that select which data you want to import and afterwards start the import by clicking on Import Data.

Features

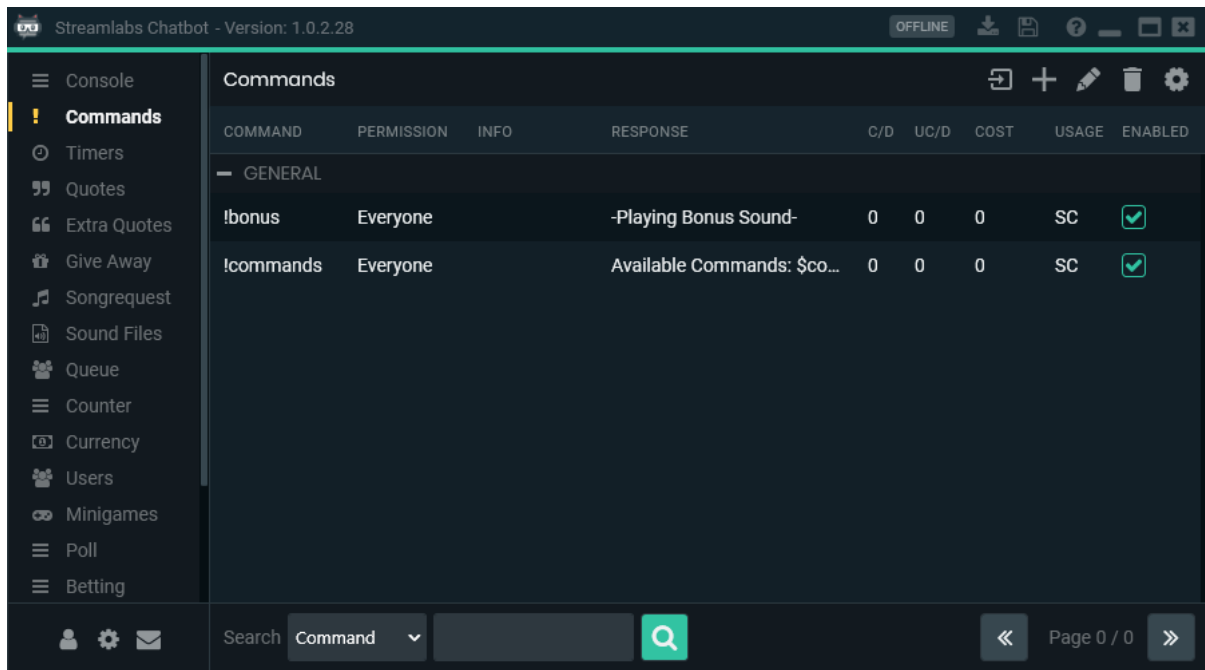

Console

On the console you will see all the incoming chat messages. On the right side you have a menu list of events such as subs, sponsors, etc.. There are other options which can be enabled by simply clicking on the filter icon.

Aside from this at the top of the console you have access to Macro buttons which you can bind commands to. Further in the document this will be explained in more detail.

Commands

This is where you would start off if you want to create Commands. There are \$parameters that you can use in the commands to achieve various result. More information on these parameters can be found on page XYZ.

\$Parameters & Permission levels can be found further in to the documentation.

!Command Add (command) (permlvl) (response) [EDITOR]

<i>Example</i>	!Command Add !Cookie +r All your cookies belong to me!
<i>Response</i>	{user} --> Successfully added !Cookie. Permission: Regular - Message: All your cookies belong to me!

!Command Edit (command) (permlvl) and/or (response) [EDITOR]

<i>Example</i>	!Command Edit !Cookie +a /me ate \$count cookies!
<i>Response</i>	{user} --> Successfully edited !Cookie. Permission: Everyone. Message: /me ate \$count cookies!

!Command Remove (command) [EDITOR]

<i>Example</i>	!Command Remove !Cookie
<i>Response</i>	{user} --> Successfully removed !Cookie.

!Command Count (command) (num) [EDITOR]

<i>Example</i>	!Command Count !cookie 10
<i>Response</i>	{user} --> Successfully set the count for !cookie to 10.

!Command Usage (command) (usage ex: SC) [EDITOR]

<i>Example</i>	!Command Usage !cookie SC
<i>Response</i>	{user} --> Successfully set the usage of \$command to \$value.

!Enable (command) (true/false)		[EDITOR]
<i>Example</i>	!Enable !cookie true	
<i>Response</i>	{user} --> Succesfully enabled !Cookie	
!Command Cooldown (command) (minutes)		[EDITOR]
<i>Example</i>	!Command Cooldown !cookie 2	
<i>Response</i>	{user} --> Successfully set the cooldown of !cookie to 2.	
!Command UserCooldown (command) (minutes)		[EDITOR]
<i>Example</i>	!Command Cooldown !cookie 5	
<i>Response</i>	{user} --> Successfully set the user cooldown of !cookie to 5.	

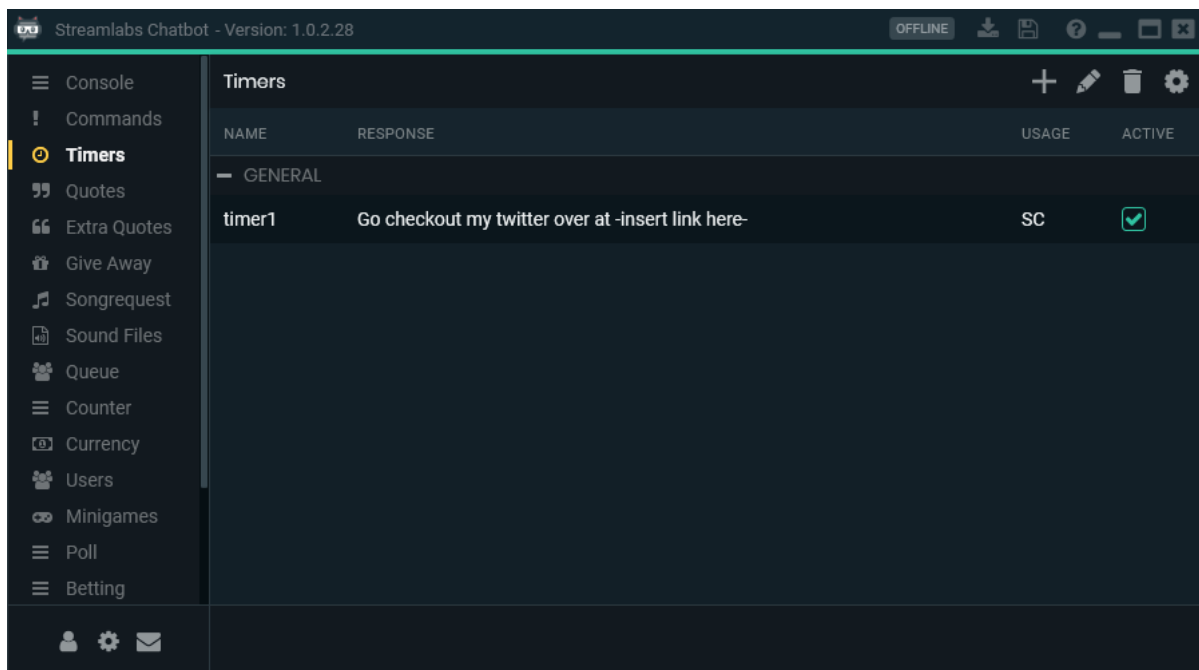

Sharing Commands

If you wish to share commands with your fellow streamer you can export them as .abcom (Streamlabs Chatbot Command) or .abcomg (Streamlabs Chatbot Command Group) by right clicking on a command. You have two options Export Command to export the single command or Export Group to Export all commands in that specific Group.

Importing Commands

Importing a script is simple. Simply click the Import Button in  the Command Tab, Navigate to the Zip File and Open it. Afterwards the bot will import the script for you and reload your scripts so it's ready to go.

Timers

This is where you will create your own Timers. These are messages that the bot will automatically post into chat after an interval of X minutes. The interval is completely based on the Setting at the top.

All the timers will follow this same interval so this means the bot will post the first timer after the interval passes. Then it will start timing again, once the interval passes again it will post the second timer and so on eventually going through all of them and then starting back at the top.

!Timer Add (name) (response) [EDITOR]

<i>Example</i>	!Timer Add !Meow /me meows at \$randusername
<i>Response</i>	{user} --> Successfully added !meow. Permission: Everyone - Message: /me meows at \$randusername

!Timer Edit (name) (response) [EDITOR]

<i>Example</i>	!Timer Edit !Meow /me growls at \$randusername
<i>Response</i>	{user} --> Successfully edited !Meow. Message: /me growls at \$randusername!timer remove (name) / Doesn't remove command [Ed

!Timer Remove (name) [EDITOR]

<i>Example</i>	!Timer Remove !Meow
<i>Response</i>	{user} --> Successfully removed !Meow.

!Activate (name) (true/false) [EDITOR]

<i>Example</i>	!Activate !Meow false
<i>Response</i>	{user} --> Succesfully de-activated !Cookie

Quotes

This is where things you've said on stream can be stored. You can change the permission on who can request a random quote and who can add them for you through chat.

You can also set the Cooldown and the Date Format. Every quote that gets added will automatically contain the Game & Date when the quote was created. So whenever someone calls upon the random quote they'll see when it happened and what you were playing at the time.

!Quote Add (text) **[ADD PERMISSION]**

<i>Example</i>	!Quote Add "I am a cat!" - AnkhHeart
<i>Response</i>	{user} --> Successfully added Quote #0: "I am a cat!" – AnkhHeart [Thief] [01/01/2015]

!Quote Edit (id) (text) **[EDITOR]**

<i>Example</i>	!Quote Edit 0 "I am not a cat!" – AnkhHeart [Thief] [02/01/2015]
<i>Response</i>	{user} --> Successfully edited Quote #0: "I am not a cat!" – AnkhHeart [Thief] [02/01/2015]

!Quote Remove (id) **[EDITOR]**

<i>Example</i>	!Quote Remove 0
<i>Response</i>	{user} --> Successfully deleted Quote #0

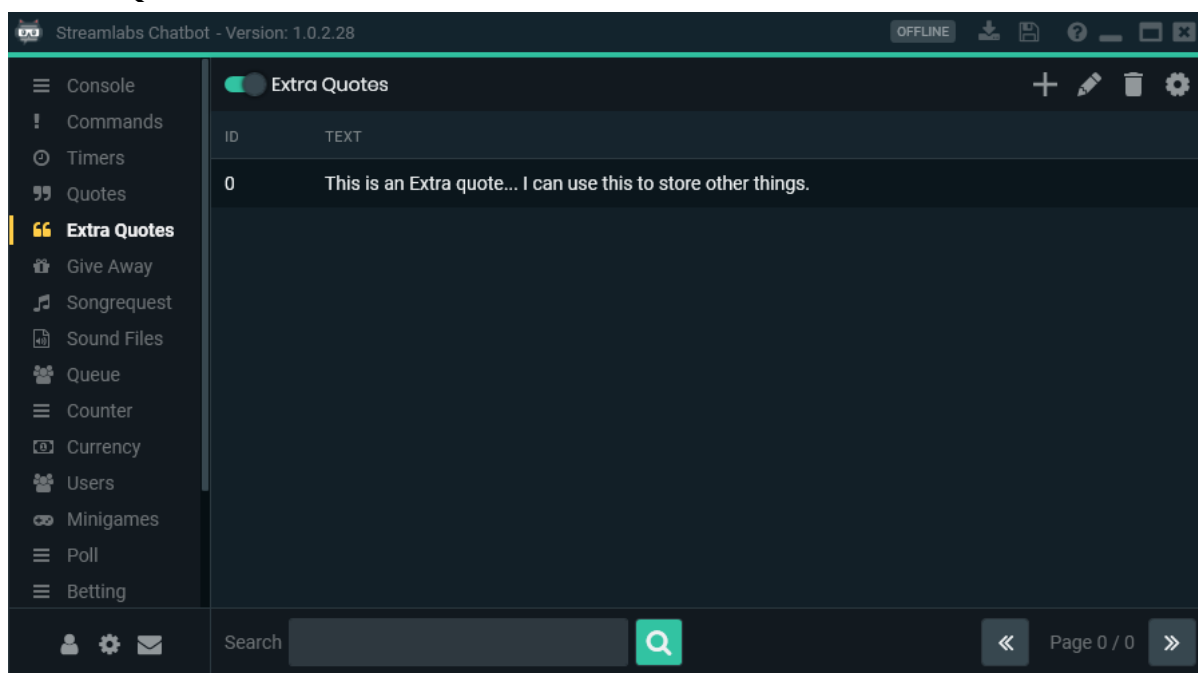

!Quote **[VIEW PERMISSION]**

<i>Example</i>	!Quote
<i>Response</i>	Quote #2: "Duct tape solves all problems!" - AnkhHeart

!Quote (id) **[VIEW PERMISSION]**

<i>Example</i>	!Quote 0
<i>Response</i>	Quote #0: "I am not a cat!" - AnkhHeart

Extra Quotes

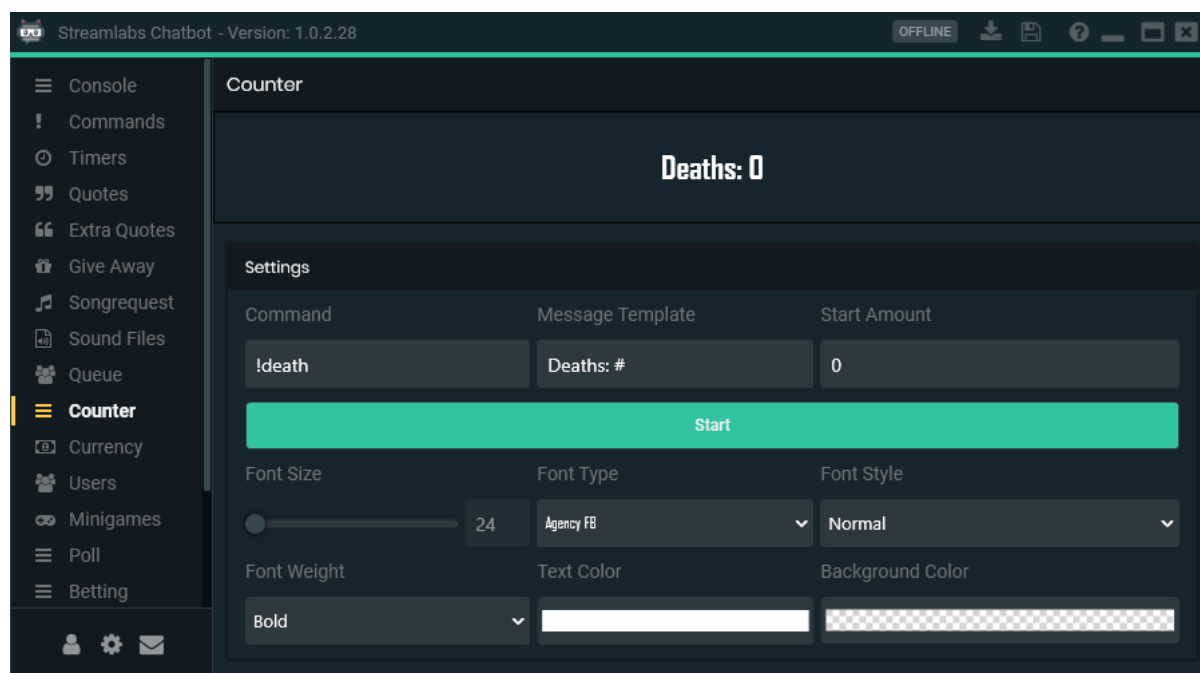

Using the Extra Quotes you can create your own version of the Quote System to store things that aren't specifically quotes. You can change the command, decide whether you want the Game & Date to show or not, change the Permissions and Response.

The underlying chat commands function the same way except if you do change the command you will also have to adjust the commands. By default this is !Gif if you change it to !Pun then you will have to use the commands starting with !Pun instead of !Gif.

!Gif Add (text)		[ADD PERMISSION]
<i>Example</i>	!Gif Add http://tinyurl.com/randomGif.gif	
<i>Response</i>	{user} --> Successfully added Gif #0: http://tinyurl.com/randomGif.gif	
!Gif Edit (id) (text)		[EDITOR]
<i>Example</i>	!Gif Edit 0 http://tinyurl.com/randomGif2.gif	
<i>Response</i>	{user} --> Successfully edited Gif #0: http://tinyurl.com/randomGif2.gif	
!Gif Remove (id)		[EDITOR]
<i>Example</i>	!Gif Remove 0	
<i>Response</i>	{user} --> Successfully deleted Gif #0	
!Gif		[VIEW PERMISSION]
<i>Example</i>	!Gif	
<i>Response</i>	Gif #2: http://randomURL.com/randomGif15.gif	
!Gif (id)		[VIEW PERMISSION]
<i>Example</i>	!Gif 0	
<i>Response</i>	Gif #0: http://randomURL.com/randomGif2.gif	

Counter

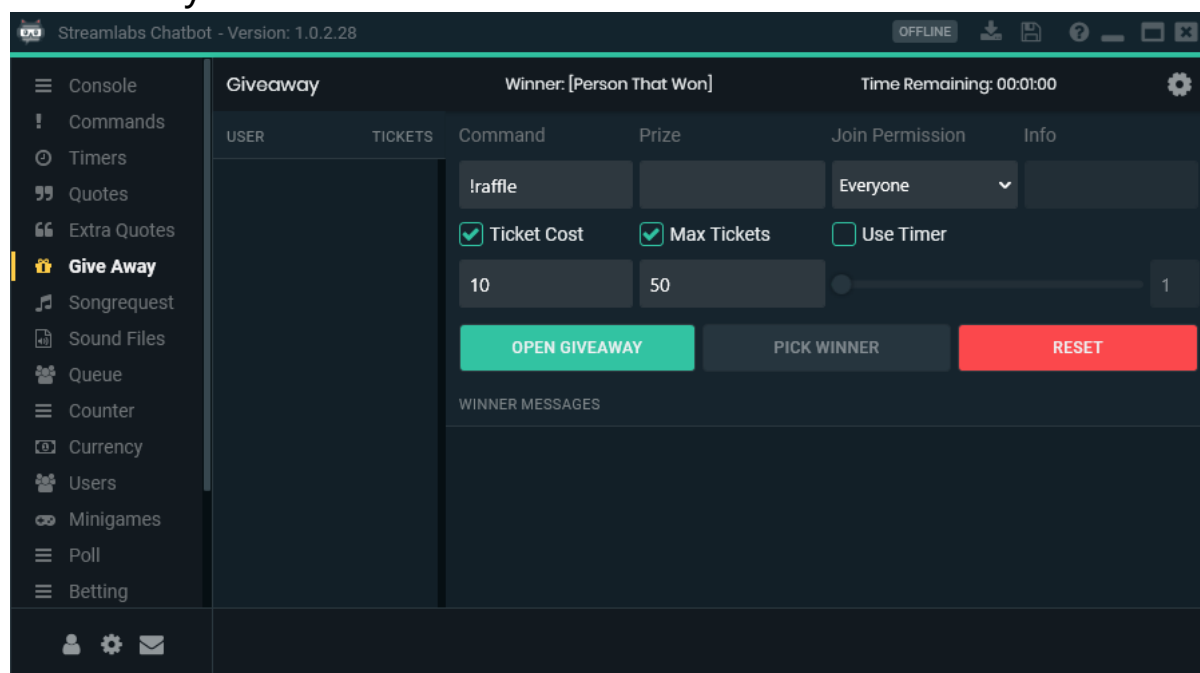

You can use the Counter to create a Death Counter, Hug Counter, Cookie Counter, etc.. It's used to count anything. You can change the settings to your liking just be sure to keep a # in the Msg Template since this will be replaced by the number.

In case you want to use the Counter but do not want to Capture the Display Area you can make use of a Death.txt file that is Located in the Bot's Install Directory -> Services -> Youtube -> Files Folder.

This file will be generated when you've added your first death. If you want to manually create this file then simply type !death 0 in chat. This will create the file with 0 Deaths inside. Do mind though if you changed the Command to something else you will have to use that instead.

!Death +		[MOD]
<i>Example</i>	!Death +	
<i>Response</i>	[Increased] Deaths: 124	
!Death -		[MOD]
<i>Example</i>	!Death -	
<i>Response</i>	[Decreased] Deaths: 123	
!Death (num)		[MOD]
<i>Example</i>	!Death 10	
<i>Response</i>	[Set] Deaths: 10	
!Death		[EVERYONE]
<i>Example</i>	!Death	
<i>Response</i>	Deaths: 10	

Give Away

This is where you will be able to start Give Aways. You can either have people join the Give Away for free or have them pay a fee to enter or have them pay per ticket using in Channel Currency.

On the left side you will find all the people that are entered in the Give Away and how many tickets they possess. At the bottom of the window you will see all the messages posted by the Winner when one has been picked. That way you'll know if the user is active in case chat is moving really quickly.

!Giveaway Start	Command Prize MaxEntriesPerUser EntryCost Permission	[EDITOR]
<i>Example</i>	!Giveaway Start !raffle cookies 1 25 regular	
<i>Description</i>	This starts a giveaway through chat with your own settings	
!GiveAway Start	Command Prize Permission	[EDITOR]
<i>Example</i>	!Giveaway Start !raffle cookies everyone	
<i>Description</i>	This starts a very simple give away without tickets and entry costs	
!GiveAway Close		[EDITOR]
<i>Example</i>	!Giveaway Close	
<i>Description</i>	Prevents anyone from entering past this point	
!GiveAway Winner		[EDITOR]
<i>Example</i>	!Giveaway Winner	
<i>Description</i>	Randomly picks the winner for the Give Away	

Sound Files

The Sound Files tab allows you to add sounds to the bot which you can attach to notifications and commands. From within this tab you are able to control the Volume and Votes. The votes option only applies to commands as it determines how many times a command has to be used before the sound goes off.

Currency

The screenshot shows the Streamlabs Chatbot interface with the 'Currency' system enabled. A table lists the following users and their stats:

NAME	RANK	POINTS	HOURS
Royal Webs	Unranked	22	1
Hawk Eye525	Unranked	9	0
Ali 3101	Unranked	15	0
Kaden Steward	Unranked	7	0
Salty Light - Studios	Unranked	11	0
Carl Wanless	Unranked	81	3
GodofWarChuka	Unranked	7	0
juan carlos villa	Unranked	9	0
Haden Wadley	Unranked	7	0

If the currency System is enabled everyone in your chat will start earning points based on your settings. These can be spent using the various other Systems in the bot such as Give Aways, SFX, Bet/Vote and enter Minigames.

You can create up to four Ranking Trees: One for Viewers, Subscribers, Mods and GameWisp Subscribers. Ranks are only assigned whenever the bot pays out points or when you use !points add +viewers 1 for example.

There is also room for customizing your own Payout amounts and intervals. This way you have full control over how many points people can accumulate in your stream.

If the Offline Payout amount is set to 0 the bot will not pay out any points with the stream is offline. Also replace !points with your own custom currency command.

!Points Add (name) (amount) [EDITOR]

<i>Example</i>	!Points Add AnkhHeart 10000
<i>Response</i>	{user} --> Successfully given AnkhHeart 10000 Points

!Points Remove (name) (amount) [EDITOR]

<i>Example</i>	!Points Remove AnkhHeart 1234
<i>Response</i>	{user} --> Successfully removed 1234 Points from AnkhHeart

!Points Add +Viewers / +active (amount) [EDITOR]

<i>Example</i>	!Points Add +viewers 100
<i>Response</i>	{user} --> Done giving 100 Points to everyone in chat

!Points Remove +Viewers / +active (amount) [EDITOR]

<i>Example</i>	!Points Remove +viewers 100
<i>Response</i>	{user} --> Done removing 50 Points from everyone in chat

!Points [EVERYONE]

<i>Example</i>	!Points
----------------	---------

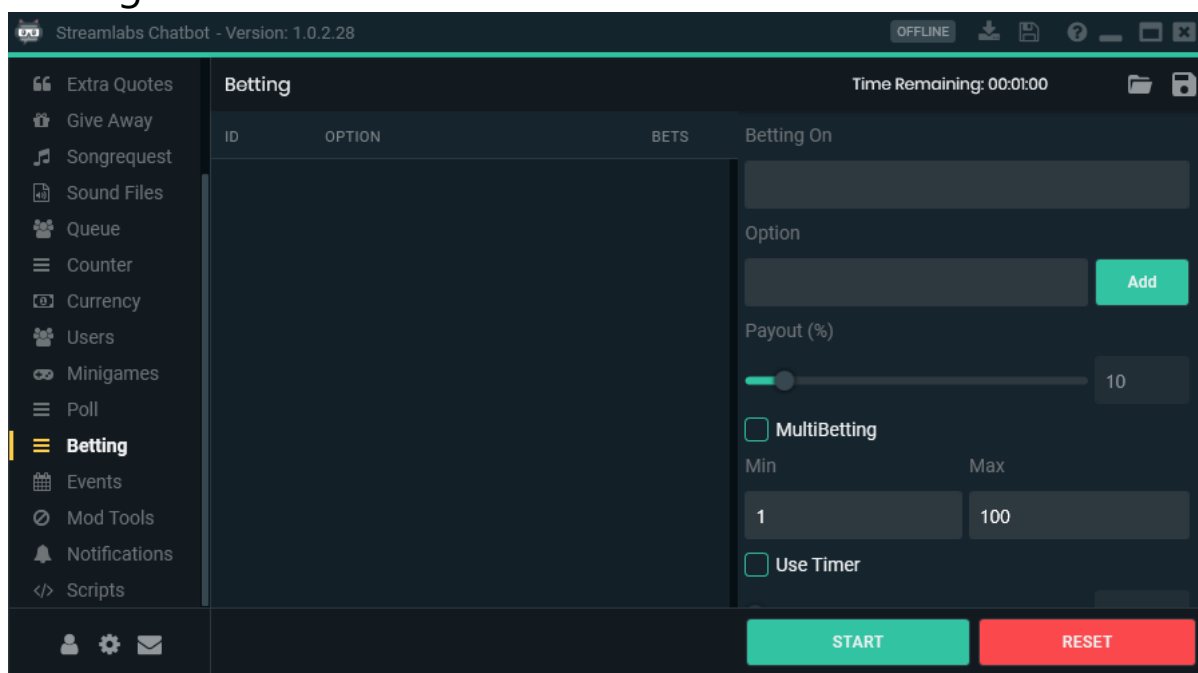

<i>Response</i>	AnkhHeart [Ninja Kitty] - Hours: 13 - Points: 1337
-----------------	--

!Transfer **[EDITOR]**

<i>Example</i>	!Transfer AnkhHeart MohammedBaraax1
----------------	-------------------------------------

<i>Response</i>	{user} --> Successfully transferred currency from AnkhHeart to MohammedBaraax1
-----------------	--

Betting

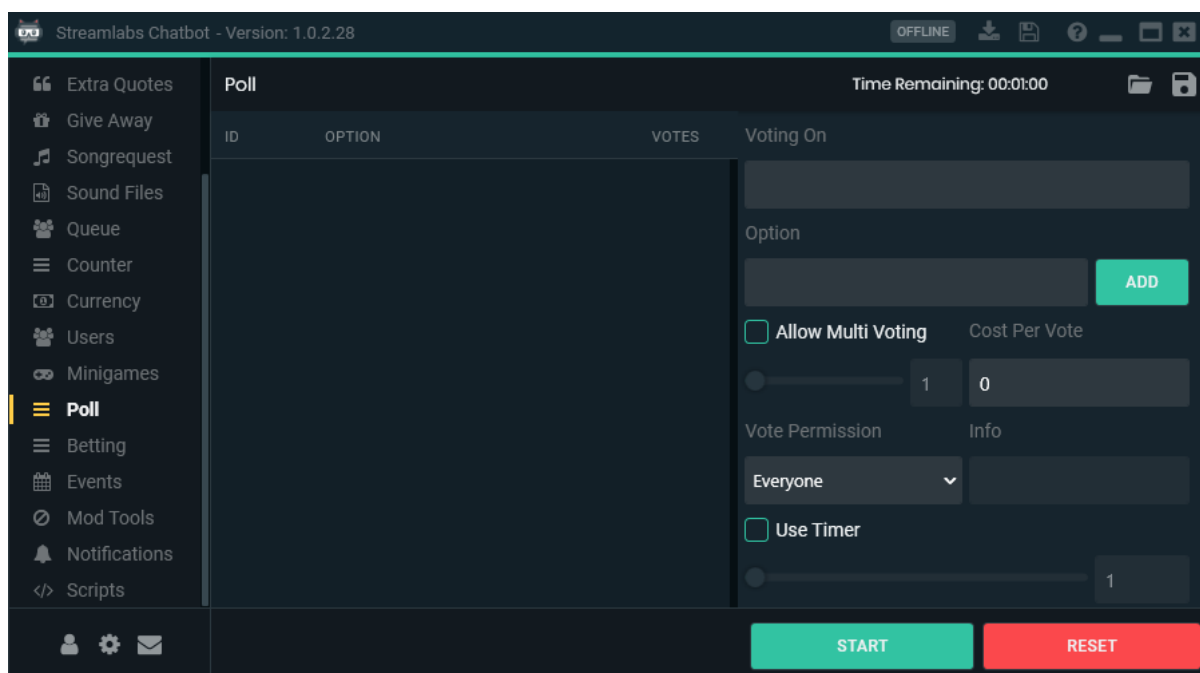

Using the Betting System you can open up the ability for Viewers to bet on the outcome of situations. These options can be saved into a present and loaded later in case you are playing the same game again.

If you wish to pick a winning option simply right click on the option and Pick it as the Winner. In case there are multiple correct Options this can be done for each of them.

!Bet (id) (amount)		[EVERYONE]
<i>Example</i>	!Bet 0 1000	
<i>Response</i>	[None to prevent chat spam from the bot]	
!Betting Start BettingOn PayoutPercent Min Max MultiBetting Options		[EDITOR]
<i>Example</i>	!Betting Start Will Ankh Survive?[35 1 100 true Yes No Maybe	
<i>Description</i>	This starts a custom betting session with custom settings	
!Betting Start BettingOn Options		[EDITOR]
<i>Example</i>	!Betting Start Will Ankh Survive? Yes No Maybe	
<i>Description</i>	This starts a custom betting session that will use the settings that have been set in the UI	
!Betting Stop		[EDITOR]
<i>Example</i>	!Betting Stop	
<i>Description</i>	Prevents anyone from betting once used	
!Betting Abort		[EDITOR]
<i>Example</i>	!Betting Abort	
<i>Description</i>	Cancels betting entirely and refunds anyone that has bet	
!Betting Winner (id)		[EDITOR]
<i>Example</i>	!Betting Winner 0	
<i>Description</i>	Picks the winning option and pay out points to everyone that bet on it	

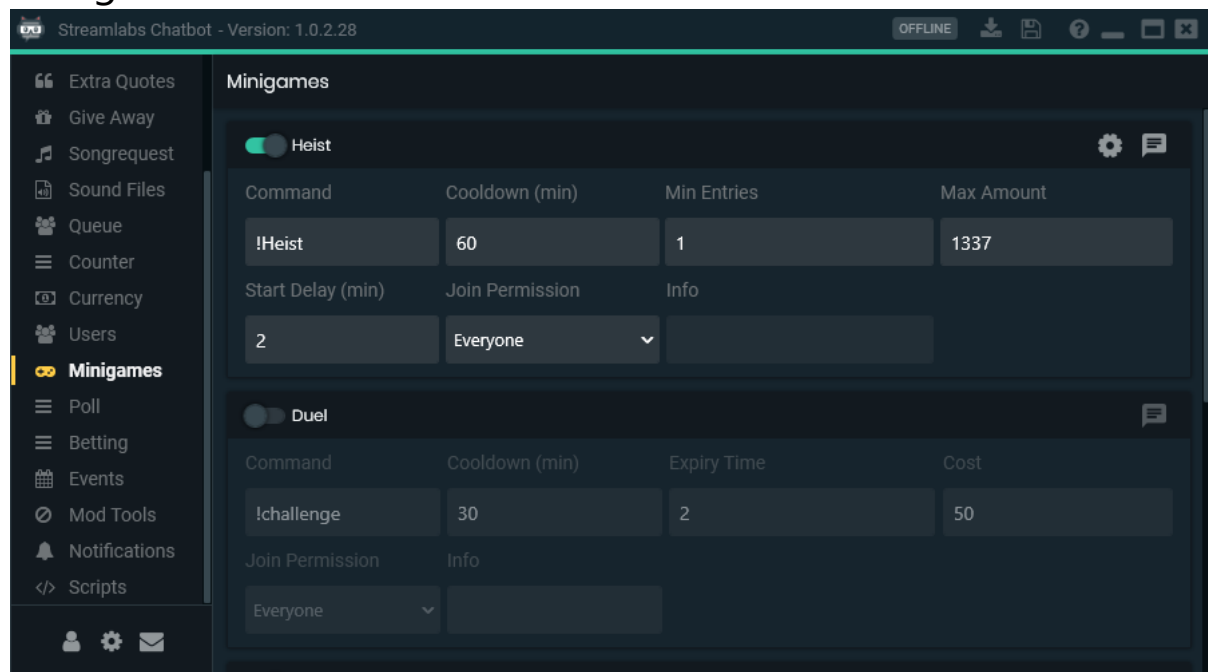

Poll

The Poll System allows you to start a poll in your channel and have your viewers vote. In case you want people to spend points for each vote they cast then you can enable this by checking Allow Multi Voting and increase the limit.

!Vote (id)		[VOTE PERMISSION]
<i>Example</i>	!Vote 1	
<i>Response</i>	[None to prevent chat spam from the bot]	
!Poll Start VotingOn Cost MaxVotes MultiVoting Options		[EDITOR]
<i>Example</i>	!poll start What Game should I play Next? 10 1 false Witcher III Pokemon	
<i>Description</i>	This starts a custom poll with your own settings (overwrites UI settings)	
!Poll Start VotingOn Options		[EDITOR]
<i>Example</i>	!poll start What Game should I play Next? Witcher III Pokemon	
<i>Description</i>	This starts a custom poll that will use the settings that have been set in the UI	
!Poll Stop		[EDITOR]
<i>Example</i>	!Poll Stop	
<i>Description</i>	Ends the poll and posts the result in chat	

Minigames - Heist

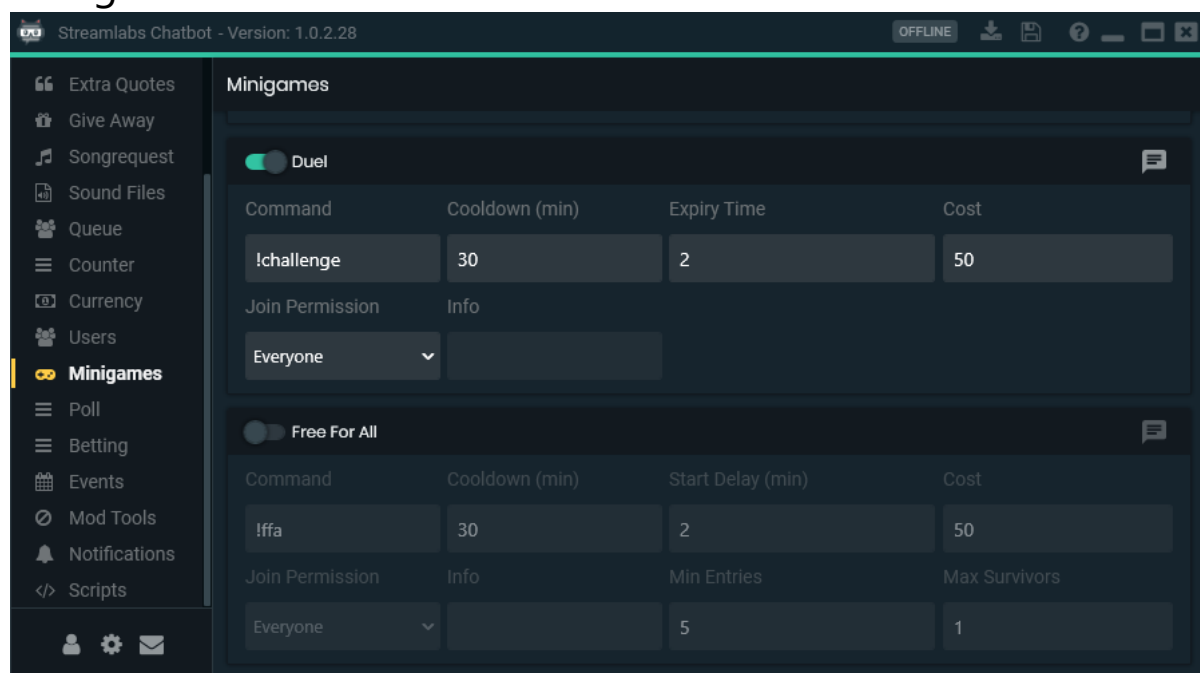

The Group Minigame allows you to create your own Minigame. You can start the customization by determining the Command that will be used, what the cooldown is, how many users have to enter before it starts, the Max amount someone can invest and who can Join.

Aside from all those options you can set the Probability for each usergroup. This determines how much chance people within that usergroup have to survive. The Payout can also be set that way you can choose how much someone gets ontop of the amount they invested in the minigame.

Finally you can fully customize all the messages that the bot will be posting in chat depending on the situation and how well/bad things are going for the ones that have joined. So if you wanted you could turn it into something completely different and not use the default Heist preset.

!Heist (amount)	[JOIN PERMISSION]
<i>Example</i>	!Heist 123
<i>Response(1x)</i>	{user} is trying to get a team together in order to hit the nearest bank. - Everyone can Join!- In order to join type !Heist (amount).

Minigames – Duel

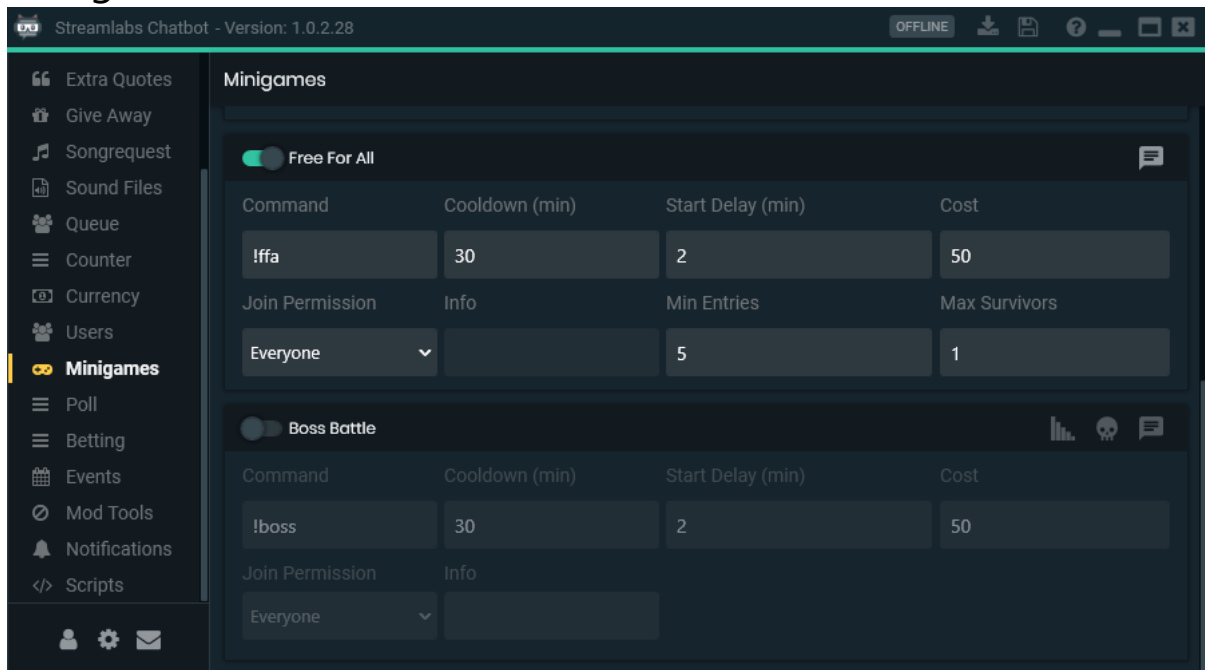

The Duel minigame allows viewers to challenge each other to a battle. The bot will process a secretive battle in the background, the winner will receive twice the cost. The loser will get nothing.

Aside from this both the challenger and challenged will go on cooldown once their fight concludes and can no longer challenge or be challenged till their cooldown expires.

!challenge (name) [JOIN PERMISSION]

<i>Example</i>	!challenge ankhheart
<i>Response(1x)</i>	{user} has challenged {target} to a fight! Type !challenge {user} to accept the challenge!

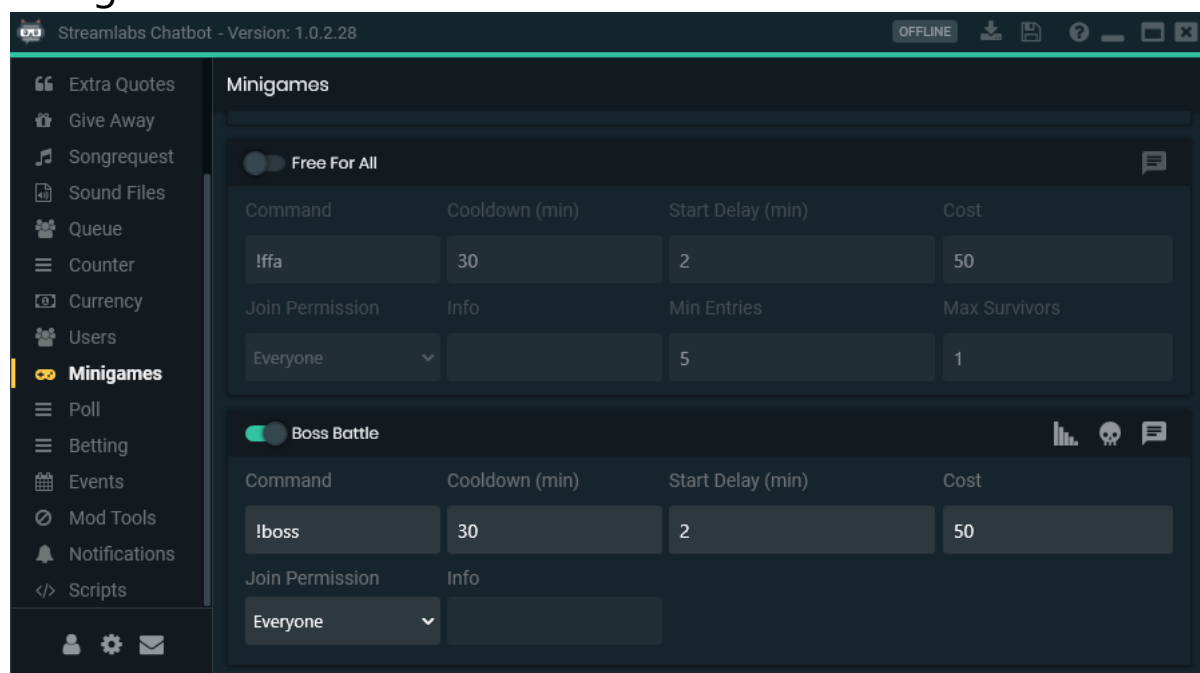

Minigames – Free for All

In the Free for All minigame multiple viewers can face off against one another. You can determine how many people end up surviving. The more people join the larger the prize pool becomes and the winner walks away with the pot. In more than one person can survive then it gets split amongst the survivors.

!ffa		[JOIN PERMISSION]
<i>Example</i>	!ffa	
<i>Response(1x)</i>	The arena is now open! Type !ffa to join!	

Minigames – Boss Battle

This allows you to create custom bosses for your viewers to fight based on how many people join. The difficulty / loot is completely up to you do mind that balancing it fairly is also your responsibility.

The Basics:

Balancing of the minigame is completely up to you so let's go down some of the basic concepts so you know how it functions in the background. That way you can determine what values would be best.

- 1) Players sign up for the battle and get a Stat sheet assigned based on their permission
- 2) Boss gets picked based on the group size (Between Min – Max Entries)
- 3) The fight starts against the boss
- 4) Damage Calculation: (User Attack – Target Defense) ex: 10 att – 5 def = 5 dmg that the target will receive
- 5) Attack order: The boss has to be attacked 3 times before it counters the last attacker. So let's say we have a group with Ankh, Momo and Gooru and Ankh attacks first and then Momo and then Gooru. After Gooru finishes his attack he would get countered by the boss and be the only person to receive damage. Now prior to every attack phase taking place the order of people attacking will be shuffled so it's not always the same person getting countered.

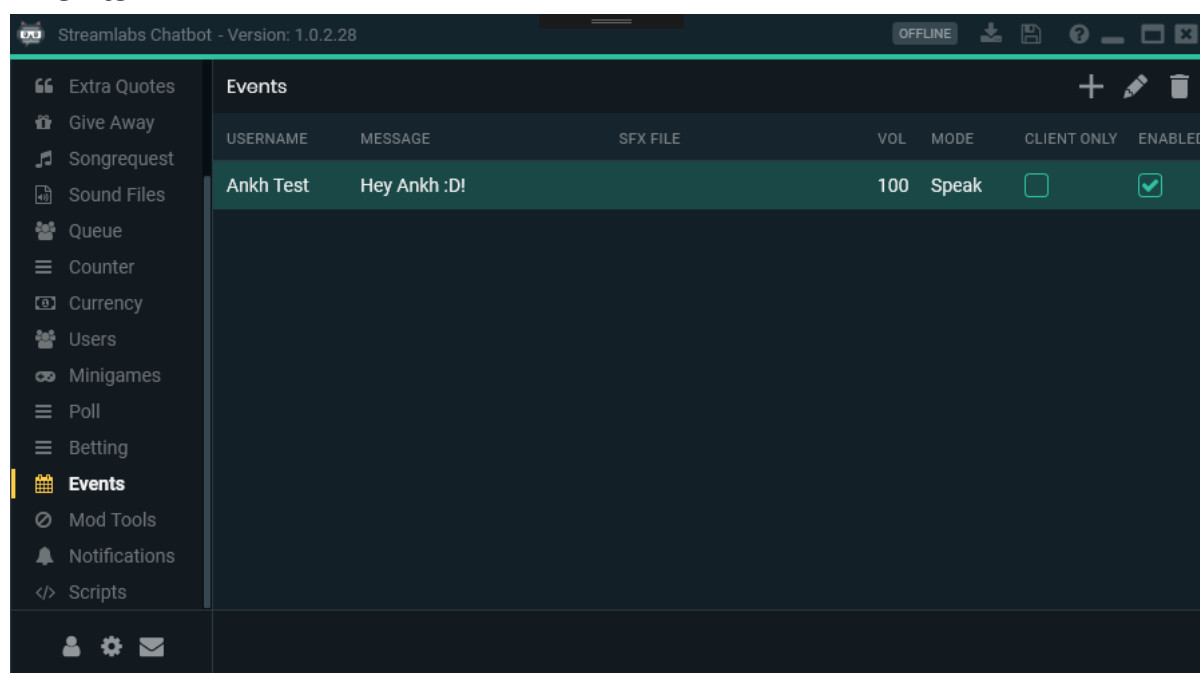

- 6) Make sure to keep the Boss's Defense lower than Player's Attack at all times so they at least have a chance to beat him
- 7) Balance the health based on the Min – Max Entries for this you will have to do a bit of math yourself based on the prior information given such as: Dmg Calculation and Attack Order
- 8) The Max Defense a player/boss can have is half their attack if this is higher than it will be capped out during calculation at 50%
- 9) Loot will get distributed evenly amongst all of the survivors at the end. In case no one survives then there is no loot to be distributed

!boss

[JOIN PERMISSION]

<i>Example</i>	!boss
<i>Response(1x)</i>	{user} is trying to get a group of adventurers together to fight a boss! Type !boss to join him!

Events

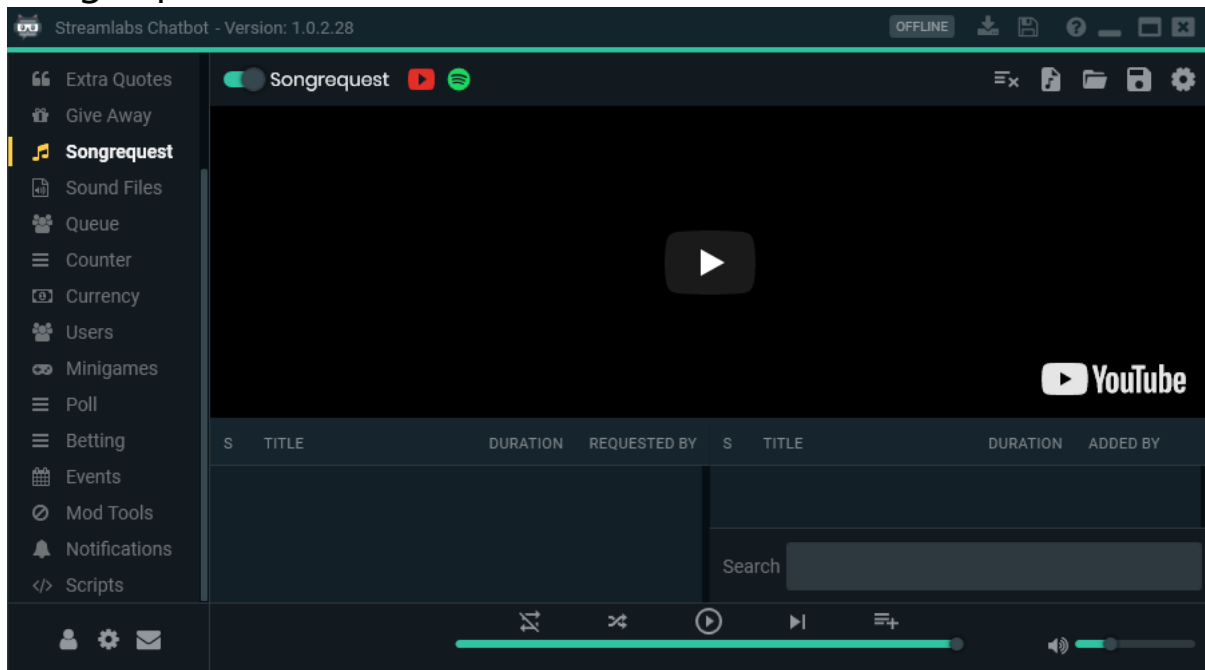

The Event System will allow the bot to automatically Greet/Shoutout the person of your choice and play a SFX if you wish. The system consists of two modes Join events and Speak events.

Speak Events will perform its action when the person of your choice speaks in your channel for the first time. Then it will post its message and/or play its SFX.

In order for the bot to re-execute the events it has to be restarted. So the best thing is to restart it before a cast.

Songrequest

The Song Request System allow you to create your own youtube playlist through the bot have them play whenever you want. Aside from that your viewers can request songs and spend currency to do so.

!Songrequest (url/token) [REQUEST PERMISSION]

<i>Example</i>	!Songrequest TY9cSI0hqTk
<i>Response</i>	{user} --> The song Amv - [MEP] So Long Sentiment 720p has been added to the queue

!Skip [SKIP PERMISSION]

<i>Example</i>	!Skip
<i>Response</i>	{user} --> Your vote to skip has been successfully registered!

!Veto [VETO PERMISSION]

<i>Example</i>	!Veto
<i>Response</i>	Amv - [MEP] So Long Sentiment 720p has been successfully skipped!

!Songblacklist add (id) [EDITOR]

<i>Example</i>	!songblacklist add dQw4w9WgXcQ
<i>Response</i>	{user} --> dQw4w9WgXcQ has been successfully Blacklisted!

!Songblacklist remove (id) [EDITOR]

<i>Example</i>	!songblacklist remove dQw4w9WgXcQ
<i>Response</i>	{user} --> dQw4w9WgXcQ has been successfully Un-Blacklisted!

!WrongSong [EVERYONE]

<i>Example</i>	!WrongSong
<i>Response</i>	{user}, Successfully removed the last song you requested.

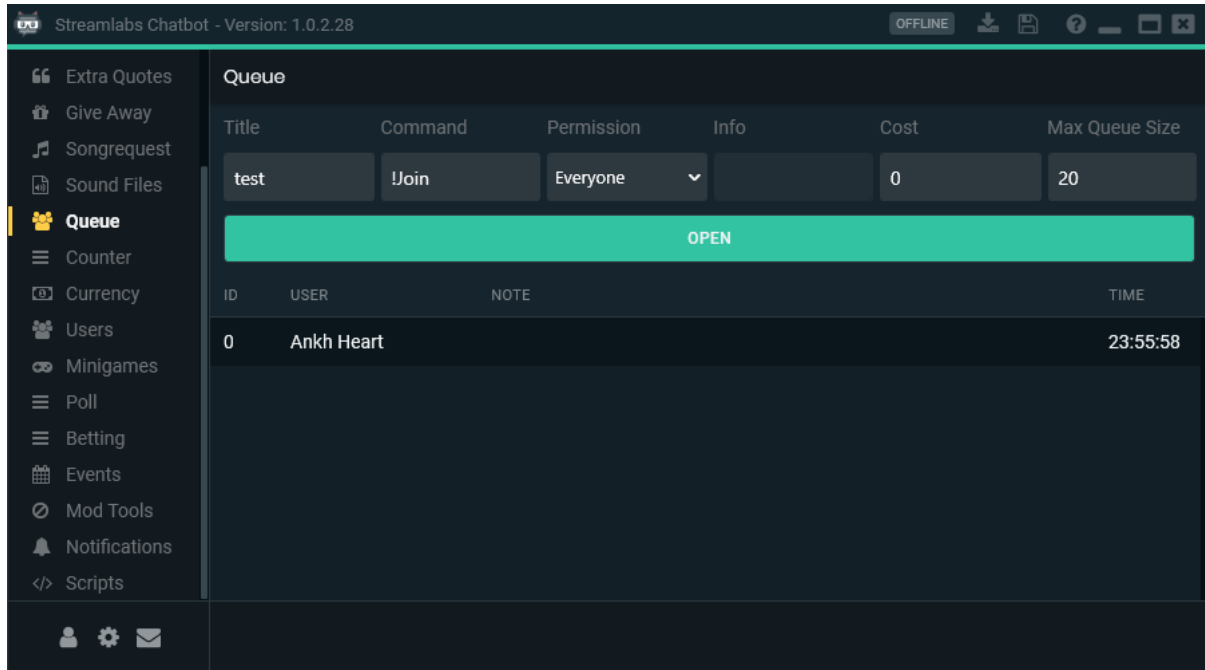

!Songlist

<i>Example</i>	!Songlist
<i>Note</i>	Create this yourself and point it to <a href="https://streamlabs.com/<your name>#/chatbot/songlist">https://streamlabs.com/<your name>#/chatbot/songlist

!Volume (number) [EDITOR]

<i>Example</i>	!Volume 50
<i>Response</i>	{user}, Volume set to 50

Queue

You can setup a Game Queue using this which allows your viewers to sign up to join you in a multiplayer game. You can have them spend currency to enter and you can even set it to Sub only in case you only want Subscribers to be able to sign up.

!Join <note> [EVERYONE]

<i>Example</i>	!Join AnkhHeart#4798
<i>Response</i>	[None unless enabled under Settings -> Localization]

!Queuelist [EVERYONE]

<i>Example</i>	!QueueList
<i>Note</i>	Create this yourself and point it to <a href="https://streamlabs.com/<your name>#/chatbot/queue">https://streamlabs.com/<your name>#/chatbot/queue

!Queue Open <game> [EDITOR]

<i>Example</i>	!Queue Open Warframe
<i>Response</i>	A queue has opened up for: Warframe - Cost: 0 points - Type !join (optional!Note) to join!

!Queue Close [EDITOR]

<i>Example</i>	!Queue Close
<i>Response</i>	The queue has been closed! You can no longer enter!

!Queue Clear [EDITOR]

<i>Example</i>	!Queue Clear
<i>Response</i>	The Queue has been cleared!

!Queue Pick <number> [EDITOR]

<i>Example</i>	!Queue Pick 3
<i>Response</i>	Next up: AnkhHeart, Castorr91, Must13

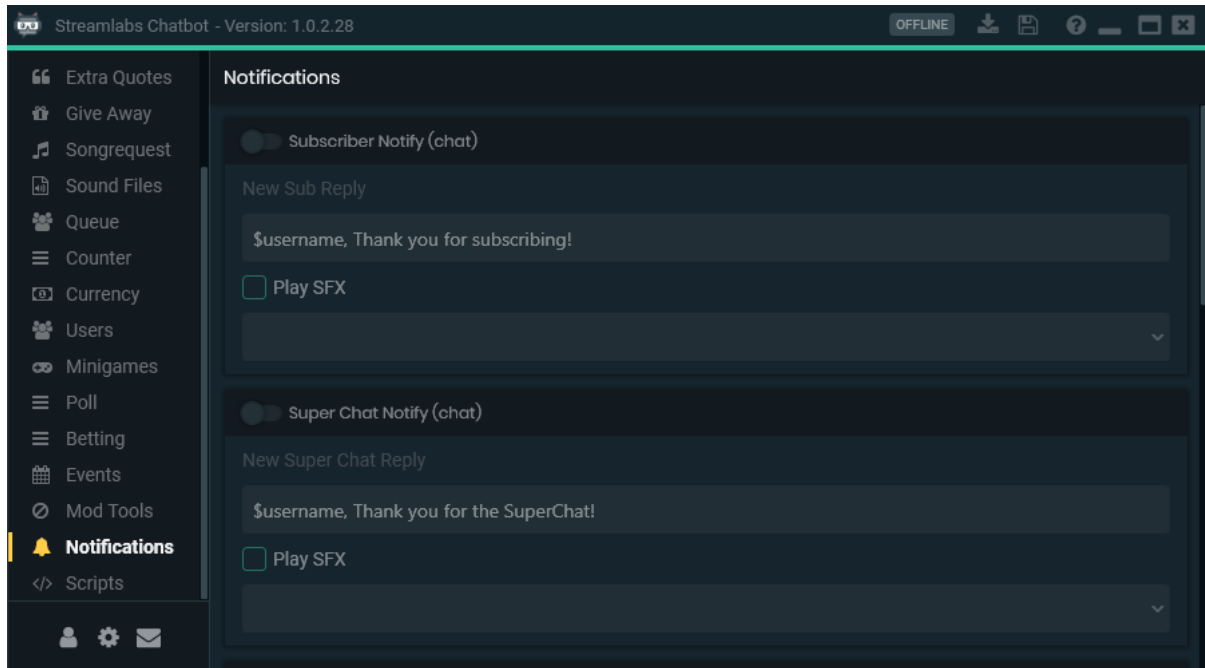

!Queue Random <number> [EDITOR]

<i>Example</i>	!Queue Random 3
<i>Response</i>	Next up: FurRiffic, WellBrained, Ocgineer

!Leave [EDITOR]

<i>Example</i>	!Leave
<i>Response</i>	AnkhHeart has left the queue.

Notifications

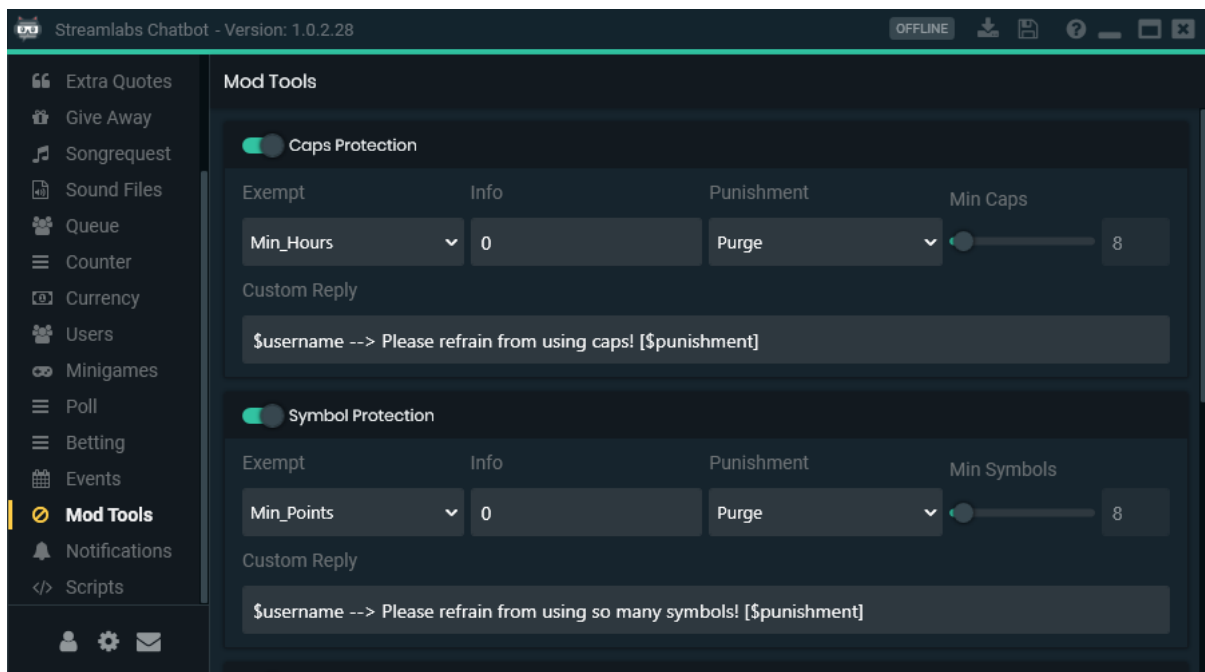

You will find various in Chat Notifications here ranging from Follower, Host, Subscriber Notifications to GameWisp Notifications. You can customize each of these to your liking.

The Subscriber, Superchat, Sponsor & Streamlabs notifications require you to have your Streamlabs account connected.

The Extra Life Notifications require you to connect your Extra Life Participant ID.

Mod Tools

Using the Mod Tools you can have the bot punish viewers that post Links without permission, Spam Caps/Symbols or very offensive words/sentences.

Each of these can be fully customized. When it comes to Link Protection you can exempt certain websites from being punished.

For the Word/Sentence Blacklist you can also make use wildcards such as * or ?. More information about Wildcards can be found on the internet ex:

https://en.wikipedia.org/wiki/Wildcard_character

In the Users tab you can see every user's id, name, whether they're an editor, external sub or regular. What they've been blacklisted from and when they were last in your channel. From here you are also able to assign the Editor status to users whom you trust. They are then able to use Editor based chat commands to add, edit, remove commands, currency, start giveaways, etc...

Settings

General

In the General Settings you will find some basic functionality such as the delay between bot messages, Auto connecting all your accounts when you launch it, etc...

Aside from this you can also setup a !raider command that can be used by Mods to save out a list of users that have raided your channel. These users will also get added to the Data.xlsx file in your Cloud folder if you have set that up.

!Reg Add/Remove (Name)		[EDITOR]
<i>Example</i>	!Reg Add AnkhHeart / !Reg Remove AnkhHeart	
<i>Response</i>	AnkhHeart has become a Regular! / AnkhHeart is no longer a Regular.	
!Sub Add/Remove (Name)		[EDITOR]
<i>Example</i>	!Sub Add AnkhHeart / !Sub Remove AnkhHeart	
<i>Response</i>	AnkhHeart has become a Subscriber! / AnkhHeart is no longer a Subscriber.	
!Blacklist Add/Remove (Name)		[EDITOR]
<i>Example</i>	!Blacklist Add AnkhHeart / !Blacklist Remove AnkhHeart	
<i>Response</i>	AnkhHeart has been Blacklisted! / AnkhHeart has been removed from the Blacklist.	

Localization

Within the Localization you have the ability to change any of the default responses though try to keep most of the \$parameters unless you really don't want them to be there.

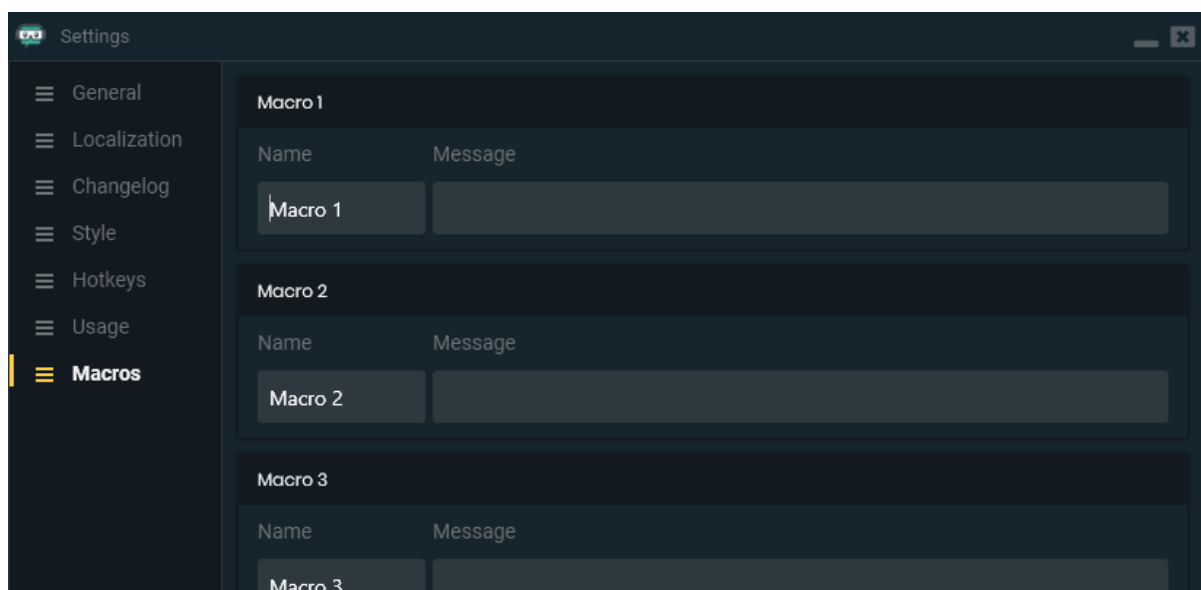

Usage

Within the Usage you can change where and how commands can be used. Whether it be Chat, Whispers or Discord or everywhere.

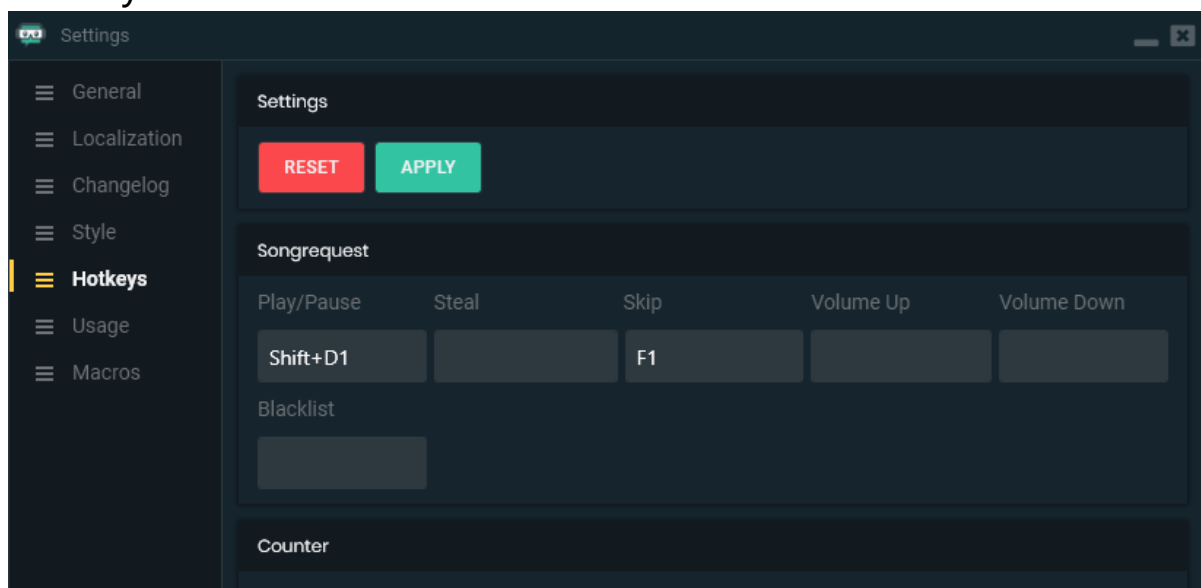

In the Core you can determine if users have to be in your Channel to use Whisper commands with the bot or not.

Macros

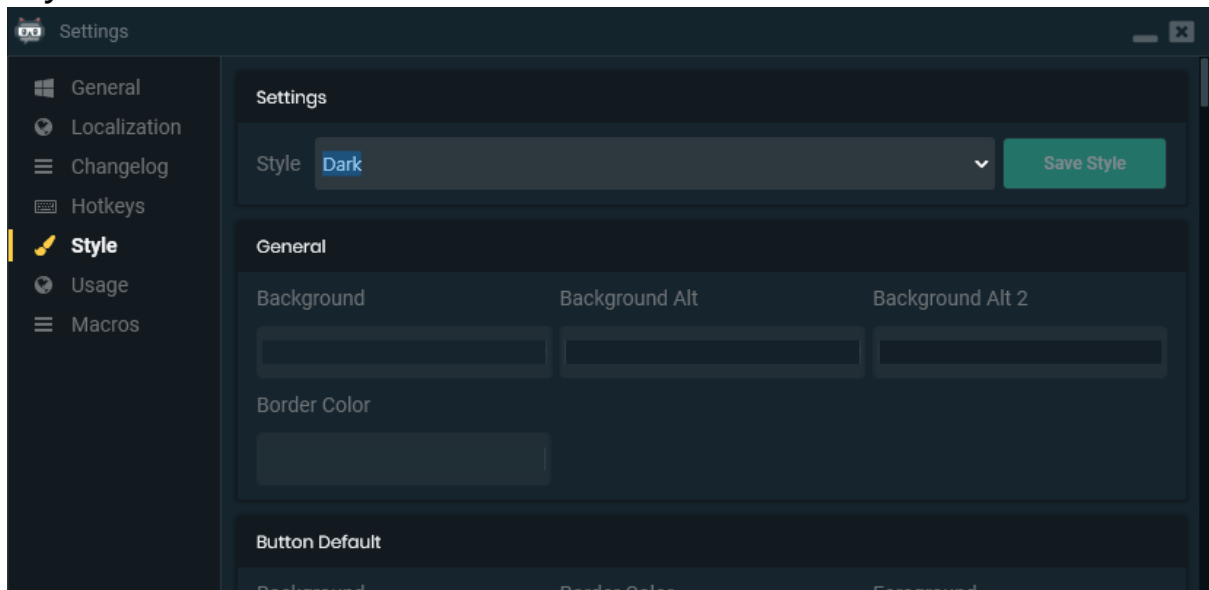

This is where you are able to setup Macros for the 7 buttons in the Console UI. It's a simple way to setup a few buttons to automatically post commands / messages in chat for you when you click them.

Hotkeys

Using the Hotkeys you can set up Global Hotkeys for various actions within the bot such as Pausing a song, adding it to your playlist, skipping, increasing the volume,... Aside from this you're also able to setup Hotkeys for the previously Mentioned Macros so you don't have to click the buttons yourself. You can just hit your hotkey and it will execute them for you. Also don't forget to click Apply at the bottom to save your Hotkeys

Style

In case you're unhappy with the colours of Streamlabs Chatbot's UI then this is where you would go. You can change every single colour here though you have to set the Style to Custom. Once you're done with your changes and you like the result simply click on Save Custom Style and it will be saved.

ChangeLogs

This is where you will be to read up on the Changelogs in case you didn't read them prior to updating to a newer version.

Parameters

Basic Parameters

\$desc(description)

<i>Description</i>	Special parameter that can be placed on the first line of a command to sync a custom description to the web
<i>Example</i>	<code>\$desc(This command does an API call somewhere!) \$readapi(https://randomapi.com/thing)</code>

\$userid

<i>Description</i>	Displays the user's id, in case of Youtube it's the user's channel id. Make sure to use \$userid when using \$addpoints, \$removepoints, \$givepoints parameters.
<i>Example</i>	<code>/me steals a cookie from \$userid !test</code>
<i>Response</i>	Bot steals a cookie from ankhheart

\$username

<i>Description</i>	Displays the user's display name. Make use of this parameter when you just want to output a good looking version of their name to chat.
<i>Example</i>	<code>/me steals a cookie from \$username !test</code>
<i>Response</i>	Bot steals a cookie from AnkhHeart

\$targetid

<i>Description</i>	Displays the target's id, in case of Youtube it's the target's channel id. Make sure to use \$targetid when using \$addpoints, \$removepoints, \$givepoints parameters.
<i>Example</i>	<code>/me kicks \$targetid in the face! !kick AnkhHeart</code>
<i>Response</i>	Bot kicks ankhheart in the face!

\$targetname

<i>Description</i>	Displays the target's display name. Make use of this parameter when you just want to output a good looking version of their name to chat.
<i>Example</i>	<code>/me kicks \$targetid in the face! !kick ankhheart</code>
<i>Response</i>	Bot kicks AnkhHeart in the face!

\$touserid

<i>Description</i>	Displays the target's or user's id, in case of Youtube it's the target's or user's channel id. Make sure to use \$touserid when using \$addpoints, \$removepoints, \$givepoints parameters.
<i>Example</i>	<code>/me kicks \$touserid in the face! !kick Chair or !kick</code>
<i>Response</i>	Bot kicks chair in the face! or Bot kicks ankhheart in the face

\$tousername

<i>Description</i>	Displays the target's or user's display name. Make use of this parameter when you just want to output a good looking version of their name to chat.
<i>Example</i>	<code>/me kicks \$tousername in the face! !kick thunderceptor11 or !kick</code>
<i>Response</i>	Bot kicks Thunderceptor11 in the face! or Bot kicks AnkhHeart in the face!

\$randuserid

<i>Description</i>	Displays a random user that has spoken in chat recently. In case of Youtube it's the random user's channel id. Make sure to use \$randuserid when using \$addpoints, \$removepoints, \$givepoints parameters.
<i>Example</i>	/me gives \$randuserid a hug! !hug
<i>Response</i>	Bot gives ankhheart a hug!

\$randusername

<i>Description</i>	Displays a random user that has spoken in chat recently. Make use of this parameter when you just want to output a good looking version of their name to chat.
<i>Example</i>	/me gives \$randusername a hug! !hug
<i>Response</i>	Bot gives AnkhHeart a hug!

\$msg

<i>Description</i>	Displays the text after the command
<i>Example</i>	\$username rolls a \$randnum(1,21) for \$msg !msg I wish I had 9 lives!
<i>Response</i>	Bot: AnkhHeart rolls a 18 for I wish I had 9 lives!

\$dummyormsg

<i>Description</i>	This will get replaced by anything behind the command. If there is nothing it be cleared from the response message.
<i>Example</i>	http://api.com/\$dummyormsg !test Cats or !test
<i>Response</i>	Bot: http://api.com/Cats or http://api.com

\$dummy

<i>Description</i>	This is a Dummy that will not post the message if there is nothing behind the command
<i>Example</i>	\$dummy \$readrandline(C:\Users\Ankh\Blah.txt) !8ball Am I green?
<i>Response</i>	Bot: Perhaps?!

\$arg1 to \$arg9

<i>Description</i>	\$arg1 will give you the first word after the command and \$arg9 the ninth. If these parameters are in the command it expects them to be there if they are not entered the command will not post.
<i>Example</i>	/me hugs says \$arg1 \$arg2! !argtest Hi Meow? Cookies?
<i>Response</i>	Bot Hi Meow?!

\$argl1 to \$argl9

<i>Description</i>	\$argl1 will give you the first word after the command and \$argl9 the ninth but all in lower case. If these parameters are in the command it expects them to be there if they are not entered the command will not post.
<i>Example</i>	/me hugs says \$arg1 \$arg2! !argtest Hi Meow? Cookies?
<i>Response</i>	Bot hi meow?!

\$num1 to \$num9

<i>Description</i>	Expects a valid integer
<i>Example</i>	/me hugs \$targetname \$num2 times! !hug ankhheart 10
<i>Response</i>	Bot hugs AnkhHeart 10 times!

\$randnum(max) or \$randnum(min,max)

<i>Description</i>	Displays a random number in a specified range
<i>Example</i>	/me rolls a \$randnum(1,7)! !roll
<i>Response</i>	Bot rolls a 3!

\$randquote

<i>Description</i>	Displays a random quote
<i>Example</i>	\$randquote !randquote
<i>Response</i>	Bot: I am not a cat! – AnkhHeart [Thief] [01/01/2015] \$randextra

\$randextra

<i>Description</i>	Displays a random value from the extra quotes
<i>Example</i>	\$randextra !randgif
<i>Response</i>	Bot: http://randomURL.com/gif12.gif

\$quotes

<i>Description</i>	Displays the amount of quotes
<i>Example</i>	There are \$quotes quotes. !quotes
<i>Response</i>	Bot: There are 123 quotes.

\$maxquotes

<i>Description</i>	Displays the highest number quote
<i>Example</i>	There are \$quotes quotes. Ranging from 0 to \$maxquotes. !quotes
<i>Response</i>	Bot: There are 123 quotes. Ranging from 0 to 122.

\$count

<i>Description</i>	Counts amount of times a command has been used
<i>Example</i>	/me has \$count jars of salt. !count
<i>Response</i>	Bot has 3 jars of salt. Bot has 4 jars of salt. Bot has 5 jars of salt etc...

\$checkcount(command)

<i>Description</i>	Displays the count of a specific command
<i>Example</i>	Cookie Count: \$checkcount(!cookie) !check
<i>Response</i>	Bot: Cookie Count: 10

\$commands(NumCommandsPerPage)

<i>Description</i>	Displays a list of all available commands for the user
<i>Example</i>	Commands: \$commands(3) !commands or !commands (PageNumber)
<i>Response</i>	Bot: Commands: !Cookie, !Slap, !Caster [Page 0/2]

\$queuepos(targetid)

<i>Description</i>	This will display the target's position in the queue
<i>Example</i>	\$username you are in Position \$queuepos(\$userid) !MyPos
<i>Response</i>	AnkhHeart you are in Position 1

\$queue(amount)

<i>Description</i>	This will display the first X amount of people in the queue
<i>Example</i>	Next Up in Queue: \$queue(3) !NextUp
<i>Response</i>	Next Up in Queue: #0 mohammedbaraax1, #1 ankhheart, #2 gamegooru21

\$timers(NumTimersPerPage)

<i>Description</i>	Displays a list of all available Timers
<i>Example</i>	Timers: \$timers(3) !timers or !timers (PageNumber)
<i>Response</i>	Bot: Timers: !ctt, !twitter, !youtube [Page 0/1]

\$date

<i>Description</i>	Displays the Date based on the format under Quote Settings
<i>Example</i>	Currently it is \$date
<i>Response</i>	Bot: Currently it is 08/09/2015

\$sfx(NumSFXPerPage)

<i>Description</i>	Displays a list of all available SFX for the user
--------------------	---

<i>Example</i>	SFX: \$sfx(3) !sfx or !sfx (PageNumber)
<i>Response</i>	Bot: SFX: !scream, !pika, !morph [Page 0/0]

\$time

<i>Description</i>	Displays the caster's time
<i>Example</i>	Currently it is \$time over at AnkhHeart's part of the world.
<i>Response</i>	Bot: Currently it is 10:20 PM over at AnkhHeart's part of the world.

\$currencyname

<i>Description</i>	Displays currencyname
<i>Example</i>	In this channel you can collect \$currencyname !currency
<i>Response</i>	Bot: In this channel you can collect Cookies!

\$currentsong and \$requestedby

<i>Description</i>	Return the current song that is being played through songrequest
<i>Example</i>	Current Song: \$currentsong – Requested By \$requestedby !currentsong
<i>Response</i>	Bot: Current song: ONE MORE FIGHT – Requested By AnkhHeart

\$nextsong and \$nextrequestedby

<i>Description</i>	Return the current song that is next in queue
<i>Example</i>	Next Song: \$nextsong – Requested By \$nextrequestedby !nextsong
<i>Response</i>	Bot: Next song: ONE MORE FIGHT – Requested By AnkhHeart

\$countdown(12:00 AM) or \$countdown(04/05/2015 12:00 AM)

<i>Description</i>	Allows you to start a countdown from the current time to the set time/date
<i>Example</i>	\$countdown(04/05/2015 12:00 AM) !sleep
<i>Response</i>	Bot: 1 day 2 hours 48 minutes 36 seconds

\$countup(12:00 AM) or \$countup(04/05/2015 12:00 AM)

<i>Description</i>	Allows you to set a start date for when the bot should start counting
<i>Example</i>	\$countup(07/03/2016 12:00 AM) !UsingStreamlabs Chatbot
<i>Response</i>	Bot: 1 day 2 hours 48 minutes 36 seconds

\$math[MathFunction]

<i>Description</i>	Allows you to perform math functions inside of Streamlabs Chatbot
<i>Example</i>	\$math[10+5/2] !Math
<i>Response</i>	Bot: 12

\$extralifegoal

<i>Description</i>	Grabs your Extra Life goal
<i>Example</i>	\$extralifegoal !goal
<i>Response</i>	Bot: 5000

\$extralifeamount

<i>Description</i>	Grabs the amount you currently raised for Extra Life
<i>Example</i>	\$extralifeamount !amount
<i>Response</i>	Bot: 100

Currency Parameters

\$points

<i>Description</i>	Displays the num of points of the user or target
<i>Example</i>	\$username has \$points \$currencyname !cookies or !cookies ankhheart
<i>Response</i>	Bot: AnkhHeart has 1234 Cookies!

\$pointstext

<i>Description</i>	Displays the num of points of the user or target nicely formatted
<i>Example</i>	\$username has \$pointstext \$currencyname !cookies or !cookies ankhheart
<i>Response</i>	Bot: AnkhHeart has 1,234 Cookies!

\$raids

<i>Description</i>	Displays amount of times the user or target has raided the channel
<i>Example</i>	\$username has raided the channel \$raids time(s) so far! !raids or !raids AnkhHeart
<i>Response</i>	Bot: AnkhHeart has raided the channel 3 time(s) so far!

\$rank

<i>Description</i>	Displays the users rank
<i>Example</i>	\$username is Rank: \$rank !rank or !rank AnkhHeart
<i>Response</i>	Bot: AnkhHeart is Rank: Ninja Kitty

\$hours

<i>Description</i>	Displays amount of hours the user has been in the stream for
<i>Example</i>	\$username spent \$hours in the stream! !hrs
<i>Response</i>	Bot: AnkhHeart spent 10.5 hrs in the stream!

\$level

<i>Description</i>	Displays the users level
<i>Example</i>	\$username is Level \$level! !Lvl
<i>Response</i>	Bot: AnkhHeart is Level 10

\$toppoints(num)

<i>Description</i>	Displays top X amount of users based on points (Except Caster & Bots)
<i>Example</i>	Top 3: \$toppoints(3) } !top3
<i>Response</i>	Bot: Top 3: #1 Promouse(10000), #2 Gamegooru21(9999), #3 EdeMonster(9998)

\$tophours(num)

<i>Description</i>	Displays top X amount of users based on hours(Except Caster & Bots)
<i>Example</i>	Top 2: \$tophours(2) !top2
<i>Response</i>	Bot: Top 2: #1 KrystalRayne(123 Hrs), #2 Pixelmonkey (120 Hrs)

\$pointspos

<i>Description</i>	Displays the users position in the ranking based on amount of points
<i>Example</i>	\$username is ranked # \$pointspos !mypos
<i>Response</i>	Bot: AnkhHeart is ranked #1

\$hourspos

<i>Description</i>	Displays the users position in the ranking based on amount of hours
<i>Example</i>	\$username is ranked # \$hourspos !hrspos
<i>Response</i>	Bot: AnkhHeart is ranked #2

\$nxtrankreq

<i>Description</i>	Displays the amount of points/hours the user requires for his next rank
<i>Example</i>	\$username, You need \$nxtrankreq points to become a \$nxtrank!
<i>Response</i>	Bot: AnkhHeart, You need 13 points to become a Ninja Kitty!

\$nxtrank

<i>Description</i>	Displays the next rank that the user can achieve
--------------------	--

<i>Example</i>	<code>\$username, The next rank that you can achieve is \$nxtrank!</code>
<i>Response</i>	Bot: AnkhHeart, The next rank that you can achieve is Ninja Kitty!

\$addpoints("targetid", "min", "max", "succeed", "fail")

<i>Description</i>	Adds points to a certain user and sends a message upon succeeding / failing
<i>Example</i>	<code>\$addpoints("ankhheart", "10", "50", "ankhheart Got \$value points", "Failed to give points!") !addpoints</code>
<i>Response</i>	Bot: AnkhHeart got 25 points

\$removepoints("targetid", "min", "max", "succeed", "fail", "forceremove true or false")

<i>Description</i>	Removes points from a certain user and sends a message upon succeeding/failing. Force remove(true/false) removes points even if the user doesn't have enough.
<i>Example</i>	<code>\$removepoints("ankhheart", "10", "100", "Removed \$value points from ankhheart.", "Unable To remove \$value points from ankhheart!", "false") !removepoints</code>
<i>Response</i>	Bot: Removed 85 points from ankhheart.

\$givepoints("fromid", "toid", "num", "succeed", "fail", "forcegive true or false")

<i>Description</i>	Gives points from one person to another.
<i>Example</i>	<code>\$givepoints("\$userid", "\$targetid", "50", "\$username gave \$value points to \$targetname", "\$username didn't have enough points to give to \$targetname!", "false") !give gamegooru21</code>
<i>Response</i>	Bot: AnkhHeart gave 50 points to Gamegooru21

\$value [Only Works inside of \$addpoints, \$givepoints or \$removepoints]

<i>Description</i>	Gets replaced with the random value between min & max
<i>Example</i>	<code>\$givepoints("\$userid", "\$targetid", "50", "\$username gave \$value points to \$targetname", "\$username didn't have enough points to give to \$targetname!", "false") !give gamegooru21</code>
<i>Response</i>	Bot: AnkhHeart gave 50 gamegooru21

\$newbalance(targetid) [Only Works inside of \$addpoints, \$givepoints or \$removepoints]

<i>Description</i>	Gets replaced with the remaining balance after a \$removepoints, \$addpoints or \$givepoints transaction
<i>Example</i>	<code>\$givepoints("\$userid", "\$targetid", "50", "\$username gave \$value points to \$targetname. \$targetname: \$newbalance(\$targetid) points remaining.", "fail", "false") !give gamegooru21</code>
<i>Response</i>	Bot: AnkhHeart gave 50 gamegooru21. AnkhHeart 50 remaining

Sub Count

\$subcount

<i>Description</i>	Displays your streams sub count
<i>Example</i>	AnkhHeart has \$subcount subs! !subcount
<i>Response</i>	Bot: AnkhHeart has 0 subs!

File Reading Parameters

\$readline(FileLocation)

<i>Description</i>	Reads the first line of the document
<i>Example</i>	<code>\$readline(C:\test.txt) !currentsong</code>
<i>Response</i>	Bot: Currently playing: Popskyy - Rize Up

\$readrandline(FileLocation)

<i>Description</i>	Reads a random line from the file
<i>Example</i>	<code>/me slaps \$randusername with a \$readrandline(C:\test2.txt)! !slap</code>
<i>Response</i>	Bot slaps AnkhHeart with a Tuna! Bot slaps AnkhHeart with a Brick! etc..

\$readspecificline(FileLocation,LineNum)

<i>Description</i>	Reads a specific line from the file (Starts from 0)
<i>Example</i>	<code>/me slaps \$randusername with a \$readspecificline(C:\test2.txt,3)! !slap</code>
<i>Response</i>	Bot slaps AnkhHeart with a Shovel!

Custom API Reading Parameter

\$readapi(URL)

<i>Description</i>	Displays the text on the URL's page. Max 500 characters
<i>Example</i>	<code>\$readapi(https://nightdev.com/hosted/followers.php?channel=ankhheart&limit=5)</code>
<i>Response</i>	Bot: 1. BensGaming808, 2. Gamakuro, 3. GENERAL_XROS, 4. wulleybully, 5. NorQuel

Save File Parameters

\$savetofile("FileLocation","Text")

\$savetofile("FileLocation","Text","SucceedMsg","FailMsg")

<i>Description</i>	Adds to the end of the file
<i>Example</i>	<code>\$savetofile("C:\test.txt","\$msg","Succeeded :D","Failed! ") !save I am a cat</code>
<i>Response</i>	Bot: Succeeded!

\$overwritefile("FileLocation","Text")

\$overwritefile("FileLocation","Text","SucceedMsg","FailMsg")

<i>Description</i>	Overwrites all the data in the .txt file with the added text
<i>Example</i>	<code>\$overwritefile("C:\test.txt","\$msg","Succeeded :D","Failed! ") !save I am a cat</code>
<i>Response</i>	Bot: Succeeded!

Miscellaneous Parameters

\$months

<i>Description</i>	Only usable in the Sponsor Notifications
<i>Example</i>	<code>\$username just sponsored for \$months months in a row!</code>
<i>Response</i>	Bot: AnkhHeart just sponsored for 3 months in a row!

\$donationmsg

<i>Description</i>	Only usable in the Streamlabs Chat Notification
<i>Example</i>	<code>\$username just donated \$amount USD! Message: \$donationmsg</code>
<i>Response</i>	Bot: AnkhHeart just donated 10 USD! Message: Harro <3

Generated Text Files

The bot automatically generates text files that can be used to display information on stream. These files can be found in the Bot's Install Directory -> Services -> Youtube -> Files folder. If you don't remember where you installed the bot just Right click on its shortcut and select Open File Location. If this leads you to the Startup folder instead do it once more on the shortcut there and eventually you will end up in the Bot's install Directory.

Streamlabs Chatbot Python Scripting

Setup

In order to properly use Python Scripts within Streamlabs Chatbot you need to have Python 2.7 installed: <https://www.python.org/ftp/python/2.7.13/python-2.7.13.msi>

Once you've done that click on the Settings Icon inside of the Scripts tab -> Pick Folder and navigate to your C:\Python27\Lib folder on your System. This can vary from the one that I am referring to since it all depends on where you installed Python. Once you've found the Lib folder select it and hit Save.

Afterwards you can right click within the Scripts View and reload any scripts. At the bottom of the page you will see Errors being logged from the Python Scripts that you're trying to load in case they are not considered valid or have bugs in them.

Importing

Importing a script is simple. Simply click the Import Button in  the Scripts Tab, Navigate to the Zip File and Open it. Afterwards the bot will import the script for you and reload your scripts so it's ready to go.

Assigning API Key to Script

Whenever you right click on a script you're able to select `Insert Api Key` which will put a small .js file in the script's folder that will give it access to connect to the chatbot's websocket server.

The Api Key in question can be refreshed whenever you wish. Though in this case you will need to update each client.js file so it uses the appropriate key. This key is used as a password so only clients which you have granted access may connect to the server.

Creating your own script?

If you want to create your own scripts please checkout the Chatbot boilerplate over at:
Wiki: <https://github.com/AnkhHeart/Streamlabs-Chatbot-Python-Boilerplate/wiki>
Code: <https://github.com/AnkhHeart/Streamlabs-Chatbot-Python-Boilerplate>

FAQ

For the FAQ please check the website!

<http://www.Streamlabs Chatbot.com/faq/>
